

MINIATURE BALL SCREWS

PRODUCT CATALOGUE

Miniature Ball Screws Division

| Divize miniaturních kuličkových šroubů |

We have been manufacturing ball screws since 1967 and we deliver them almost all over the world. To provide our customers with the highest quality of the products and co-operation, we keep investing a lot of effort in continuous improvement. Thanks to this effort, every year we fight for the top positions in the leading innovative competitions. A certificate of quality in compliance with EN ISO 9001:2008 proves that our quality management system is at a high level. We also aim for maximum support of the industrial machinery development activities in our area, for which we participate in the following associations:

Association of
Engineering
Technology

CECIMO

Brno Regional
Chamber of
Commerce

OUR CUSTOMERS APPRECIATE ESPECIALLY THE FOLLOWING CHARACTERISTICS:

Quality

- We use new state-of-the-art technologies for manufacture and testing.
- Every ball screw undergoes substantial in-process and output inspection.
- We archive measured values for every product.

Development and courage

- We are not afraid of designing and implementing solutions for untypical applications.
- We take up full responsibility for our solutions.
- Thanks to our in-house development department we are very quick and flexible in this designing.

Customer orientation

- We produce on the basis of client drawings.
- We are able to produce with smaller stop dimensions than required by ISO 3408.
- We like to actively engage in the proposed movement axes of our customers, helping them in correct dimensioning and cost-saving solutions.

Miniature ball screws (from diameter 5 mm with pitch 0,5 mm) are structural elements, which transmit rotary movement to straight movement with high efficiency (approximately 94 - 97%). They feature high rigidity, accuracy, durability and especially high precision positioning in compact dimensions. Micro ball screws consist of ball shaft, ball nut both with ground thread, and its recirculation system as the standard ball screws.

Characteristics of the Micro Screws:

- High precision positioning screws
- Very high running smoothness
- Delivered with required preloading
- Longest service life due to corresponding use of materials, custom engineering and the quality promise of a highly sophisticated production

Miniature ball screws applications:

Please contact us with your applications to find all possibilities with our Miniature Ball Screws.

1. Application and use

Ground miniature ball screws are used where high accuracy and precision are required, e.g. in robotic surgery, medical devices and the aerospace industry – see table of Application and use below:

APPLICATION INDUSTRY	APPLICATION EXAMPLE	PRECISION GRADE		
		P0	P1	P3
MICROSCOPES	Positioning tables	•	•	
	Measuring stages	•		
	Microscope stages		•	•
	Automated Sample Handling	•	•

2. Technical data

CHARACTERISTICS	PICTURE	DESCRIPTION	
GROUND BALL SCREW THREAD		Accuracy and quality of the miniature ball screws are largely dependent on the manufacturing technology. Miniature ball screws are produced by grinding technology only.	
BALL SCREW PROFILE		To achieve the maximum transmission efficiency, it is necessary to make an ideal profile of the ball screw thread. The profile is not made of one radius but two radii with offset (so called gothic arch, see picture on the left). This profile shape offers an ideal efficiency to load capacity (ratings) ratio of the ball screw.	
BALL SCREW RECIRCULATION SYSTEM		Internal ball recirculation with beds	Version marking: IN
	Maximum speed coefficient: $n_{max} = \frac{50\,000}{d_0}$		
		External ball recirculation radially inserted	Version marking: EX
	Maximum speed coefficient: $n_{max} = \frac{70\,000}{d_0}$

CHARACTERISTICS	PICTURE	DESCRIPTION
GRADE OF RAW MATERIALS	Stainless steel: 1.4112	Nuts and the shaft are hardened to 50-60 HRC. Minimum shaft strength $R_m = 800 \text{ MPa}$. The final quality is tested by long term durability tests followed by the analysis of the functional parts of the transmission assembly when the specified wear limits are achieved.
	Steel: Cf53	
THREAD PITCH ACCURACY CLASS SPECIFICATION	P0	3,5
	P1	6
	P3	12
SURFACE TREATMENT - ELECTROPOLISHING		Superior surface finishing of ball screws improving mechanical properties, lifespan and corrosion resistance. A smooth finish cuts down on friction loss, improving the bearing ratio, optimizing wear and tear and minimizing energy consumption and noise. Remove burrs from sharp or fragile parts that are not suitable for traditional finishing techniques without rounding edges or damaging the part.
PASSIVATION - STAINLESS STEEL		Corrosion resistance - removes free iron particles from the surface. Long-term surface stability - forms a protective layer of chromium oxide -> protects in aggressive environments (moisture, chemicals). Reduced risk of microcracks - a cleaner, dirt-free surface minimizes the formation of cracks that could lead to material fatigue.
COATING - TUNGSTEN DISULFIDE		Tungsten disulfide (WS₂) solid lubricant coating. Extremely thin (max. 0,5 µm) film coating provides friction and sliding wear reduction that improves performance. Properties • To reduce energy lost To friction • To minimize excessive heat from friction • As lubrication for tight tolerances • Wear reduction • Thermal stability

3. Main dimensions

Miniature ball screws are produced from diameter 5 mm, length 60 mm, pitch 0,5 mm up to diameter 16 mm, length 1000 mm and pitch 10 mm. All variants are listed in the table below:

SHAFT DIAMETER [mm]	PITCH [mm]	BALL DIAMETER [mm]	SHAFT MAXIMUM LENGTH [mm]

5. Rolled Miniature Ball Screws

Main information about Rolled Miniature Ball Screws – these ball screws are mainly transport ball screws used for applications where a high precision of positioning is not needed, e.g. transport of lifting equipment, automation modules and small pick-and-place machines, textile and packaging machines (small positioning tasks), etc.

CATEGORY CHARACTERISTICS

- very good quality / price ratio
- standard geometrical and working accuracy, lifetime and load ratings in accordance with ISO 3408 (DIN 69051)

BASIC TECHNICAL PARAMETERS

- diameter from 6 mm
- lengths up to 900 mm
- accuracy classes T5, T7
- minimum strength of the shaft material $R_m=650$ MPa
- efficiency approx.: 93-95%
- operating temperature:
-20°C to +60°C (according to the lubrication type)

APPLICATIONS

- Transport mechanism
- Automation modules and small pick-and-place machines
- textile and packaging machines
- CNC engraving machines and light milling machines (e.g. PCB, plastic, wood)

KSK is a sought-after partner worldwide for the development and manufacture of precision ball screws. We owe this position to our reliability, excellent quality and smart product selection.

- The up-to-date catalogue version is always available on the company website in section Downloads.
- General terms and conditions as well as operating conditions can be found on the company website in section Downloads.
- Most of the used calculations are based on the ISO 3408 standard dealing with ball screws.
- Due to continuous technical development within our company, the technical parameters quoted in this catalogue are not binding on the KSK Precise Motion, a.s. company.
- The KSK Precise Motion, a.s. company hereby declares that it bears no liability for incorrect design proposals made by customers based on the data contained in this catalogue. If you need assistance, please contact our technical support.
